- Polyethylene sheath, flexible
- Operating temperature: -30...+70 °C
- Male end, pluggable
- End sleeve for probe, M6 × 0,75 threaded, high temperature proof up to 125 °C
- Optical fiber, core diameter 1.0 mm
- Optical fiber, total length: ± 1829 mm

Functional principle

Glass or plastic fibers are the optimum choice for high-temperature applications and limited spaces. They transfer the light from the sensor to a remote object. Individual fibers are used for opposed mode sensing, whereas bifurcated fibers are suited for retroreflective or diffuse mode operation.
